Microsoft's Azure AD Assessment
delivered by Advania

Goal

Identify lack of recommended practices for a well-managed and secure Azure AD environment.
Improve Identity and Access Management Posture

Deliverables

Executive Summary

◆ High level summary
◆ Results and recommendations

Detailed Report

◆ Detailed list of identified findings
◆ Recommended actions with comments by Azure AD Experts
◆ Reference document with detailed description of checks
◆ Power BI model

Overview

This assessment is based on your specific environment and helps your organization to understand and improve your Azure Active Directory (Azure AD) environment by analyzing your own data.
Our acknowledged experts help you to identify and assess your Azure AD environment to quickly provide insights and recommendations. The assessment covers the following categories: Identity Management, Access Management, Security, Governance, and Operations,

Key Features

The Azure AD Assessment offering is being developed and maintained by Microsoft´s Identity product group. Advania is the first Microsoft partner to be authorized to deliver this assessment to its customers. Data is collected in a workshop-style meeting and analyzed to identify deviations from Microsoft's recommendations. These findings are combined with Advania´s recommended practices based on our experience with previous implementations. The analyzed data is used to identify findings that are classified by priority. The reports have comments and recommendations tailored to your specific environment. At the end of the delivery an executive summary is presented with the detailed reports. The remediation activities are planned together based on your priorities.

Agenda

This is a five-day engagement with two days onsite or remote with your team. The five days will not be sequential dates.

Preparation: Identify participants, Set dates, Prerequisites
Day 1:   Interviews, Data collection
Day 2-4:   Data Analysis, Prepare report
Day 5:   Executive summary,
Technical remediation planning

In-Scope

This assessment is focused on Identity Management, Access Management, Security, Governance, and Operations of your Azure AD environment.

Here are some examples of areas covered by the assessment:

Identity Management

- Identity Lifecycle (Joiners/Movers/Leavers)
- Entitlement Management

Access Management

- Credential Management
- Authentication
- Single Sign On
- Application Access Policies
- Device Management
- Usage Analytics

Governance

- Attestation
- Auditing
- Privileged Accounts

Operations

- Service and Infrastructure Health

Supportability

Out-Scope

This is an Azure AD assessment focusing on the adoption readiness of an Azure AD environment. Any non-Microsoft identity solution is not taken into consideration.

Requirements

Specific requirements for performing the delivery are identified during a preparation call. Advania does not require any access to your environment. The tools will be provided and run by you.
