Microsoft Endpoint

Assess your Microsoft Intune environment

Goal

Identify lack of recommended practices for a well-maintained Microsoft Intune platform.

Improve overall health of the Microsoft Intune configuration.

Deliverables

Executive Summary
◆ High level summary
◆ Results and recommendations

Detailed Report
◆ Detailed list of identified findings
◆ Recommended actions with comments by an Advania Microsoft Intune expert

Remediation plan
◆ Prioritized list of actions
◆ Execution times and ownership

Overview

The Microsoft Intune assessment is an in-depth analysis of your implementation which will give you insights of your current setup and configuration.

Microsoft Intune is the main platform for mobile device management and cloud-based computer management from Microsoft. Since it is a cloud-based service, updates and changes are constant in the platform and keeping up with the changes are key for an optimized experience.

Keeping your Microsoft Intune configuration up to date is essential for supporting and securing your managed devices, making your organizations client estate ready for the challenges of tomorrow.

Key features

Our assessment offering has been developed to collect data and analyze any Microsoft Intune environment. Based on the collected data and interviews with key persons, any potential risks, opportunity for improvements and other findings are presented by our experts to the organization centered on recommendations and guidance from Advania and Microsoft including industry standards. Each finding in the report is given a priority based on how well the current environment compares with recommendations and strategic goals.

Agenda

This is a three-day offering with a two-day onsite or remote engagement. The days does not have to be sequential dates. During a preparation-call between Advania and the customer, exact dates are decided.

Preparation:	Identify participants, set dates, prerequisites
First Day:	Interview with key persons and data collection
Second Day:	Data collection (no customer involvement)
Third day:	Executive summary, Technical remediation planning and next steps

   environment and the findings

Next step plan
◆ Remediation plan with
   prioritized activities

In-scope

This assessment is focused on Microsoft Intune and related dependencies.

Here are some of the areas that are covered by the assessment:

- Enabled platforms and enrollment restrictions
- Configuration profiles
- Compliance policies
- Connector and token health
- Application Protection Policy
- Content management utilization and configuration

- Windows Autopilot configuration
- Google Android enrollment configuration
- Apple Enrollment Profile configuration
- Naming convention and standards

Out-of-scope

This is a health assessment focusing on Microsoft Intune meaning that third party products, are not in-scope.

Requirements

Specific requirements for performing the delivery are set in a preparation call. The tools are provided and run by an Advania expert. Account/accounts with admin permission to Microsoft Intune and read access in Azure AD is needed. Read access in the on premises Active Directory is also needed. Since Intune is a web-based service, no on-prem access is needed to perform assessment.
